2019 Accomplishments Report International Ocean Acidification Initiative (IOAI)

[Read the 2019 Accomplishments Report](#)

The Ocean Foundation's IOAI program was founded in 2003 to help vulnerable human communities monitor, understand, and respond to ocean acidification.

Each year we produce a report to share how we have built capacity to address ocean acidification. We are thrilled to share with you our 2019 report. Highlights from this year's report include:

- The expansion of our work into Latin America and the Caribbean
- A new national partnership with Mexico to create a broad framework to address ocean acidification
- The development of a brand new, low-cost system to adapt to ocean acidification in shellfish hatcheries
- ..and much more!

Scientists, policymakers, and industry practitioners came together for the first time at our ocean acidification symposium in Colombia last year

The Mexican Senate was the first government to receive policy training on addressing ocean acidification from The Ocean Foundation

More from the International Ocean
Acidification Initiative
